

Junlei An

Computer Engineering Student at University of Toronto | 19 Years Old, Male

CONTACT

Phone: 13605160198
Email 1: 2740913838@qq.com
Email 2:
klein.an@mail.utoronto.ca

CAPABILITIES

Programming Languages

Java, C/C++, Verilog, RISC-V assembly

Software & Tools

Git, Visual Studio Code, GitHub, Microsoft Word, Excel, PowerPoint, DaVinci, Blender, Gemini, ChatGPT

Software Development

OpenStreetMap API, Discord API, DeepSeek API, ChatGPT API

EDUCATION

University of Toronto

Bachelor of Applied Science (BASc) in Computer Engineering
2024 — Present
Expected Graduation: 2029

MacLachlan College

Ontario Secondary School Diploma
2020 — 2024

LANGUAGES

Mandarin: Native / Professional
English: Professional

PROFILE

Currently studying Computer Engineering at the University of Toronto, with deep experience accumulated in team development projects. Proficient in collaborative development toolchains and skilled at overcoming performance bottlenecks through teamwork. Possesses extensive experience in multimodality coordination and project management. Committed to creating technical value in high-performance software development or computer engineering. Aspires to fully leverage technical expertise and collaborative spirit in challenging software or computer engineering roles.

PERSONAL DEVELOPMENT & TEAM COLLABORATION EXPERIENCE

Mathematics and Programming Competition Club 2022.10 - 2024.5

Co-founder & Student Tutor

- Co-founded and expanded a student club dedicated to mathematics and programming competitions.
- Hosted weekly algorithm and problem-solving workshops; independently compiled comprehensive exercise sets.

C-Based Reversi Bot 2025.4

Independent Developer | 3rd Place (Year-wide)

- Independently developed a high-performance Reversi game bot, achieving an outstanding win rate through algorithmic optimizations.
- Ranked 3rd place overall in a large-scale competition involving over 400 peers in the cohort.

Portable Camping Stove Engineering Design 2025.1 - 2025.4

Multimodality Coordinator

- Served as the multimodality coordinator within a 6-person team, orchestrating engineering documentation and visual presentation materials to ensure complex engineering concepts were clearly communicated to non-technical stakeholders.
- Participated in the complete design cycle of the camping stove from concept to final prototype. Independently completed high-quality 3D modeling and rendering using Blender, providing intuitive and highly persuasive visual prototypes for the team's final client presentation.

4X Strategy Game Development on DE1-SoC Board 2025.9 - 2025.12

Core Developer

- Comprehensively utilized C and Nios V assembly within a two-person team to build a complex 4X strategy game from scratch on the DE1-SoC hardware development board.
- Gained robust experience in low-level assembly language development, and independently designed and implemented a dynamic interactive interface without the support of modern graphics libraries.

Interactive Map Software based on OpenStreetMap 2026.1 - 2026.4

Team Leader

- Served as team leader, managing the end-to-end development of a fully functional interactive map application from scratch, successfully parsing and visualizing massive real-world geographical data from the OpenStreetMap API.
- Responsible for overall software architecture design and task allocation, ensuring highly efficient team collaboration and a clean, maintainable codebase.
